ADEREMI MOSES TIMILEYIN

Software Engineer | Frontend & Backend | AI Automation | AI Evaluation | AI Training Specialist | AI/ML

Osogbo, Osun State, Nigeria | Remote | +234 906 896 1845 | mosestimileyinaderemi@gmail.com
LinkedIn: linkedin.com/in/moses-aderemi-6a70a5405 | GitHub: github.com/mosesaderemi

PROFESSIONAL SUMMARY

Full-stack software engineer with hands-on experience building database-driven applications, REST APIs, authentication systems, and responsive user interfaces across Java/Spring Boot, PHP/Laravel, Node.js, Python, Vue.js, React, and Next.js. Works across the entire stack, from schema design and API development to frontend integration and deployment, with a focus on secure and maintainable systems. Supplements core engineering work with AI/ML experimentation and freelance experience in AI agent development, workflow automation, AI model evaluation, and software testing. Works remotely and maintains a public project portfolio on GitHub.

CORE TECHNICAL SKILLS

Languages: Java, Python, PHP, JavaScript, TypeScript, SQL, PL/SQL

Backend: Spring Boot, Laravel, Node.js, Express, Django, Flask, FastAPI, REST API design, JWT authentication & authorization, microservices, payment integration (Stripe, Razorpay)

Frontend: Vue.js, React, Next.js, React Native (Expo), HTML5, CSS3, Tailwind CSS, Inertia.js, responsive design

Databases: MySQL, Oracle Database, PL/SQL, PostgreSQL, MongoDB, SQLite, schema design

Automation & AI: n8n, Make, Zapier, API integration, LLM agents (LangChain, LangGraph, LiteLLM), tool calling, retrieval-augmented generation, voice agents (Vapi, Deepgram)

Tools & DevOps: Docker, Docker Compose, GitHub Actions, Kubernetes manifests, Maven, Postman

Practices: Git/GitHub, debugging, functional/regression testing, unit testing, OOP

PROFESSIONAL EXPERIENCE

Full-Stack Software Engineer | Freelance (Remote) | 2019 - Present

- Build and maintain full-stack, database-driven web applications using Java, Spring Boot, Python, PHP, Laravel, and Node.js, with responsive frontends in Vue.js, React, Next.js, and Tailwind CSS.
- Design REST APIs and implement JWT-based authentication and authorization, including role-based access control, for client-facing systems.
- Develop and optimize database logic in MySQL, Oracle, and PL/SQL, including query performance work, and design schemas in PostgreSQL and MongoDB.
- Integrate Vue.js and React frontends with backend services, build cross-platform mobile interfaces with React Native (Expo), and resolve cross-stack defects.
- Containerize applications with Docker and automate builds and tests with GitHub Actions.
- Manage source control and collaborative development through Git/GitHub.

AI Automation Consultant | Freelance (Remote) | 2025 - Present

- Design workflow automations for small businesses and agencies using n8n, Make, and Zapier, connecting CRM, email, and scheduling tools via API.

- Build custom automation logic in Python and PHP for clients needing functionality outside no-code platform limits.
- Deliver end-to-end automation projects from requirements gathering through deployment.
- Built production n8n systems powered by GPT-4o and GPT-4: a multi-channel booking and upsell assistant (Instagram, WhatsApp, website chat, Google Calendar, Airtable), an insurance lead qualification system with 100-point scoring (Twilio, HubSpot, Slack alerts), and a recruitment screening system with a 28-node workflow covering CV parsing, candidate scoring, WhatsApp outreach, and interview scheduling.
- Package automations for deployment using Docker Compose, PostgreSQL, Redis, Nginx with SSL, and one-command VPS scripts, with prompt templates, test suites, and documentation.
- Build Python LLM agents with tool calling, retrieval, and voice (LangChain, LangGraph, LiteLLM, Vapi) integrated with Airtable, HubSpot, Google Sheets, Calendly, Stripe, and Google Workspace.

AI Model Evaluation & Data Annotation | Freelance (Remote) | 2025 - Present

- Evaluate AI-generated responses for factual accuracy, reasoning quality, and instruction-following against project rubrics.
- Identify hallucinations, unsupported claims, and inconsistencies, documenting findings with written justification.
- Conduct source verification and fact-checking to support evaluation decisions on ambiguous outputs.

Software Testing & Transcription QA | Freelance (Remote) | 2025 - Present

- Perform functional, regression, and usability testing across browsers and devices, documenting defects with reproduction steps.
- Review transcripts for accuracy and speaker attribution against project style guides (Rev, GoTranscript, Scribie).

SELECTED PROJECTS

Java Spring Boot JWT Boilerplate | Java, Spring Boot, JWT, PostgreSQL, Docker

- Reusable backend starter providing token-based authentication, refresh-token handling, and role-based access control for new Spring Boot applications.

Vue Laravel Auth Kit | PHP, Laravel, Vue.js, Inertia.js, Sanctum

- Full-stack authentication template pairing a Laravel API with a Vue.js frontend, covering registration, login, and session management, with email verification, password reset, and a token-based API.

Web-Based E-Commerce Bookshop Platform | PHP, MySQL

- Academic project implementing product catalog, cart, and order management with a normalized MySQL schema and admin-side inventory controls.

Real Estate Management System | PHP, MySQL

- Database-driven application for managing property listings, client inquiries, and agent assignments, with role-based access for admins and agents.

AI Model Experimentation with DeepLearning4J | Java, DeepLearning4J, Spring Boot

- Explored supervised model training within the Java ecosystem, applying core ML concepts (feature preparation, training/validation splits) outside the Python-dominant tooling most ML work defaults to, and served predictions through a Spring Boot REST API.

Healthcare Management Platform | Java 21, Spring Boot, Spring Cloud, React, TypeScript, PostgreSQL, Docker, Kubernetes

- Microservices system covering authentication, patients, doctors, appointments, prescriptions, billing, and notifications behind an API gateway with service discovery, central configuration, and JWT security, with a React and TypeScript client, Kubernetes manifests, and a GitHub Actions pipeline.

Institute Management Backend (CIITM) | Node.js, Express, MongoDB, Socket.IO

- REST and real-time API for admissions, courses, students, teachers, fees, and notices, with JWT and Google OAuth authentication, Razorpay payments, Cloudinary media storage, and a Gemini-powered student chat assistant.

Laravel E-Commerce Platform with Vue Admin Panel | Laravel, Vue 3, MySQL, Stripe

- Storefront with cart, Stripe checkout, and webhooks, plus a separate Vue 3 administration panel with dashboard charts and management of products, orders, customers, and users.

Recipe App | React Native, Expo, Node.js, Express, PostgreSQL, Clerk

- Cross-platform mobile app with Clerk authentication, recipe search and categories, video tutorials, selectable themes, and favourites stored per user in PostgreSQL.

AI Sales Agent | Python, LiteLLM, LangChain, Stripe, Calendly

- Tool-calling sales assistant that answers store questions with hybrid retrieval, recommends products from a database, books consultations, and generates payment links.

Leads Reactivation AI Voice Agent | Python, FastAPI, Vapi

- Service that calls past leads from a CRM (Airtable, Google Sheets, HubSpot) with an AI voice agent, analyses call transcripts, and writes outcomes back to the CRM.

Sales Outreach Automation | Python, LangGraph, Chroma

- Multi-step workflow that researches leads from LinkedIn, websites, news, and social media, scores them, and drafts personalised emails and interview scripts.

Personal AI Assistant | Python, LangGraph, FastAPI

- Multi-agent assistant managing email, calendar, Notion tasks, Slack, and web research through Telegram, Slack, or WhatsApp.

ADDITIONAL PROJECTS

- Demo Restaurant Website (Next.js, TypeScript, Tailwind CSS): menu, reservation and events forms, gallery.
- Login Character (React, TypeScript, Motion): animated login page that reacts to user input.
- E-Shop Mobile App (Expo, React Native, NativeWind): storefront app with onboarding and login.
- Online Book Store (Django, Stripe): cart, Stripe checkout, customer dashboard, admin panel.
- Healthcare AI Web App (Flask, TensorFlow, Docker): risk screening for six conditions, with X-ray classification.
- AI Voice Assistant (Python, Deepgram, LiteLLM): voice agent with calendar, contacts, email, and search tools.
- AI Web Scraper (Python, Crawl4AI): LLM-based directory extraction to structured CSV.
- Laravel RBAC (PHP): roles and abilities registered as Laravel Gates.
- Mechanic Work Backend (Node.js, Express, MongoDB): REST API with JWT login, profiles, and posts.

- JavaFX Desktop Systems (Java, JavaFX, MySQL, JasperReports): Bookshop, Laundry, Restaurant, and University management apps.
- Election DApp (Solidity, Brownie): election smart contract with tests.
- Electric Car Price Prediction (Python, scikit-learn): regression model on EV market data.
- MPB Framework: Mind, Paper, Building planning method with mental models and n8n examples.
- Other: E-Voting Application (Spring Boot), Airline Reservation System (Java), Oracle Queries (React, Chart.js), Updrop (Turborepo, Electron, Expo).

EDUCATION

Obafemi Awolowo University (OAU) | 2021 - 2026
B.Sc. Computer Science

The Federal Polytechnic, Offa | 2017 - 2019
National Diploma, Computer Science

LANGUAGES

English | German | French
